APPROVED MOTORS FOR AERATION TREATMENT UNITS

When replacing a primary aeration unit in your septic system, an original type of aerator must be used. The only approved alternatives for your specific type of system are listed below. Using a non-approved motor in your septic system can cause an operation failure, resulting in your system failing its operation permit inspection.

When installing a new motor, you must ensure the system is running on its proper timer settings. Timer settings can vary system to system but cannot be off longer than 30 minutes between cycles. If your system is not listed below, please check <https://odh.ohio.gov/know-our-programs/sewage-treatment-systems/pretreatment-comp>. Contact our office at (513) 732-7499 for questions or further information.
